Join the shared coverage map (optional)

RARCHAMS ARES net — a simplex coverage test shows who can reach whom on tactical simplex

What this is

During the simplex test, net control logs where check-ins are and who can hear whom. If you **choose** to join, your callsign and a **grid square** are added to a shared list that the club's coverage-map page loads, so every member can see where members are and where coverage may be weak. Joining is **completely optional**; saying no has no effect on your part in the net.

Exactly what is shown

- **Only your callsign, a grid square you pick, and the date you agreed.** No name, no street address, no phone, no e-mail.
- **You choose the precision:** a **6-character grid** (for example EN34ra, a cell a few miles across) or a **4-character grid** (for example EN34, roughly 70 × 100 miles). If you pick neither, we use the 4-character grid.
- The list is on a public web page, so anyone who knows the address can see it.
- Nothing is copied from your FCC license record. The location is whatever **you** tell net control.

How to join, and how to leave

- **Join:** tell net control “yes” on the air with your callsign and the grid square you want shown, or sign the sheet below.
- **Change or leave at any time:** tell net control (on the air, or by e-mail). You will be removed from the current list at the next update. Earlier saved copies of the page's history can also be purged on request.
- Not sure of your grid square? Net control can give you one from your city, or you can look it up on any grid-square map site.

Net control announcement:

> *“Optional: if you would like to appear on the club's shared coverage map, say yes now and give me your callsign and the grid square you want shown, six characters or four. Only your callsign and that grid are shown, nothing else. You can ask to be removed at any time.”*

Sign-up sheet

Callsign	Name (printed; not published)	Grid square	4 or 6 char	I agree (initials)	Date

By initialing, I agree to have my callsign and the grid square above shown on the club's public coverage map until I ask to be removed.

Keep this sheet with net control. The printed names are only so net control can tell members apart; they are never published.
